### **Non-technical Summary**

This report contributes to Cheshire East Council's legal obligation under the Conservation of Habitats and Species Regulations 2017 (as amended) to carry out a Habitat Regulations Assessment (HRA) on its plans for effects on European sites.

Before a plan can be adopted, the 'competent authority' (Cheshire East Council) needs to prove that the plan would have no significant effects on European sites' integrity to the satisfaction of Natural England and/or Natural Resources Wales. An uncertain result is not acceptable and is treated as adverse until proven otherwise.

HRA has been undertaken throughout the development of the Cheshire East Local Plan and has informed key stages and assessment work. The Local Plan Strategy (Part 1) was adopted in July 2017 and was supported by a HRA. The second part of the Local Plan, the Site Allocations and Development Policies (SADPD) is now being assessed. The SADPD allocates sites for development (generally non-strategic sites of less than 150 homes or 5 hectares in size) and also sets more detailed policies to guide planning application decisions in the Borough. The initial Publication Draft SADPD was subject to public consultation between August and September 2019. Careful consideration has been given to all of the comments received about the Plan including the need for any further changes to its proposed policies and allocations.

This report details the HRA for the Cheshire East Local Plan Revised Publication Draft SADPD and includes an assessment for the development policies and site allocations.

The first step of the HRA process, was to screen the SADPD to determine whether it could lead to a significant effect on European sites, either directly, or indirectly, alone, or incombination with other plans.

European sites consist of Special Areas of Conservation (SAC) designated for habitats and animal species, and Special Protection Areas (SPA) designated for bird species. Ramsar sites designated under the Ramsar Convention on Wetlands 1971 are also included following Government policy.

The most likely effects of the Local Plan SADPD on European sites are related to pressures from new development including water abstraction, changes to surface and ground water levels/quality (surface run-off, pollution events), air pollution and increased recreational pressures arising from new housing developments and increased tourism.

The Screening Assessment determined that the Local Plan SADPD could potentially have significant adverse effects as a result of changes in water levels (due to abstraction) and recreational pressures, both alone and in-combination with other plans, on the following sites:

• River Dee and Bala Lake SAC

An Appropriate Assessment was then undertaken to assess whether Cheshire East Council's SADPD has the potential to result in significant adverse effects on the integrity of identified European sites, either alone or in combination with a number of other plans and projects.

The Assessment identified that the existing policies and provisions of the Local Plan, Natural Resources Wales, the Environment Agency and United Utilities in relation to water supply, will ensure that the Local Plan SADPD will have no adverse effects on this European site.

# **1** Introduction

#### 1.1 The Cheshire East Local Plan

Cheshire East Council is in the process of developing its Local Plan, which comprises four key documents:

- 1 The Local Plan Strategy (LPS) (Part 1) sets out the vision and overall planning strategy for the Borough and contains planning policies intended to ensure that new development addresses the economic, environmental and social needs of the area. It also identifies the strategic sites and strategic locations that should accommodate most of the new development needed (Cheshire East Council, 2017<sup>a</sup>). JBA undertook the Habitats Regulations Assessment (HRA) for the LPS, which was adopted by the Council in July 2017.
- 2 The Site Allocations and Development Policies Document (SADPD) (Part 2) is the second part of the Local Plan that sets non strategic and detailed policies to guide planning application decisions in the Borough. It also allocates additional sites for development where necessary to do so.
- 3 The Minerals and Waste Development Plan Document (Part 3) will set out planning policies for minerals and waste, including the identification of specific sites for these uses.
- 4 The Crewe Hub Area Action Plan (CHAAP) is being prepared for a focused area around Crewe Railway Station and its vicinity to manage development opportunities likely to arise from investment at Crewe Railway Station, and set out a long term vision to capitalise on the arrival of HS2 to Crewe.

This HRA focuses on the Part 2 Plan, the SADPD. HRA will also be undertaken alongside the development of the Part 3 (Minerals and Waste) Plan and CHAAP and will be reported separately.

A 'call for sites' exercise was conducted for the Part 2 Plan alongside consultation on the Council's SADPD 'Issues Paper' at the end of February 2017 and held until April 2017. Furthermore, consultation on the First Draft of the Site Allocations and Development Policies document (held in September / October 2018) and initial Publication Draft (held in August / September 2019) allowed the submission of further sites to the Council.

The Council reviewed site submissions, in line with its stated site selection methodology (published separately), and those sites identified through stage 4 onwards of that process are the sites that this HRA relates to.

The initial Publication Draft SADPD was subject to public consultation between August and September 2019. Careful consideration has been given to all of the comments received about the Plan including the need for any further changes to its proposed policies and allocations.

This report details the HRA for the Cheshire East Local Plan Revised Publication Draft SADPD and includes an assessment for the development policies and site allocations. All previous consultation with Natural England throughout the local plan process has been considered in this documentation.

This report is produced in conjunction with the Revised Publication Draft of the Cheshire East Local Plan SADPD and should be read alongside that document.

#### **1.2** Habitats Regulations Assessment

European Directive 92/43/EEC on the Conservation of Natural Habitats and Wild Flora and Fauna (Habitats Directive) provides legal protection to habitats and species of European importance. The principal aim of this directive is to maintain

at, and where necessary restore to, favourable conservation status of flora, fauna and habitats found at these designated sites.

The Directive is transposed into English legislation through the Conservation of Habitats and Species Regulations 2017 (as amended) (a consolidation of the amended Conservation of Habitats and Species Regulations, 2010) published in November 2017.

It is a requirement of Regulation 105 of the Conservation of Habitats and Species Regulations 2017 (as amended) that "the plan-making authority for that plan must, before the plan is given effect, make an appropriate assessment of the implications for the site in view of that site's conservation objectives", where the plan is likely to have a significant effect on a European site or a European offshore marine site (either alone or in-combination with other plans or projects), and where it is not directly connected with or necessary to the management of the site. Regulation 105 also requires that "in the light of the conclusions of the assessment, and subject to regulation 107 (considerations of overriding public interest), the plan-making authority or, in the case of a regional strategy, the Secretary of State must give effect to the land use plan only after having ascertained that it will not adversely affect the integrity of the European site or the European offshore marine site (as the case may be)".

The HRA process is underpinned by the precautionary principle, especially in the assessment of potential impacts and their resolution. If it is not possible to rule out likely significant effects on the evidence available then it is assumed that a risk may exist and it needs to be addressed in the assessment process, preferably through changes to the proposed measure or through options such as avoidance or control measures. Only once this assessment has been completed can it be concluded that there is no adverse risk to a European site resulting from the plan.

Spatial planning documents are required to undergo Habitats Regulations Screening if they are not directly connected with or necessary to the management of a European site. As the SADPD is not connected with, or necessary to, the management of European sites, it is necessary to undertake a HRA of this strategy.

#### **1.3 HRA of the Local Plan Part 2: Site Allocations and Development Policies** Document

This report details the HRA for the Cheshire East Local Plan Part 2, hereafter referred to as the Site Allocations and Development Policies Document (SADPD) within this report. The HRA is written in relation to the Revised Publication Draft version of the SADPD.

#### **1.3.1** Previous Assessment and Reporting

The HRA previously conducted for the LPS can be accessed at http://cheshireeastconsult.limehouse.co.uk/portal/. The final HRA report (examination document SD 004) consolidated all of the work undertaken for the LPS.

The conclusions of the HRA for the LPS remain valid and are not considered further in this assessment, unless directly relevant to the considerations of the SADPD.

## 2 HRA Methodology

#### 2.1 Introduction

It is accepted best-practice for the HRA of strategic planning documents to be run as an iterative process alongside the plan development, with the emerging policies, sites or options continually assessed for their possible effects on European sites and modified or abandoned (as necessary) to ensure that the subsequently adopted plan is not likely to result in significant effects on any European sites, either alone or 'in-combination' with other plans. This is undertaken in consultation with Natural England and/or Natural Resources Wales (NRW) and other appropriate consultees.

#### 2.2 HRA Process

The HRA will follow a three-stage process as outlined in the Department for Communities and Local Government (DCLG) guidance "Planning for the Protection of European sites: Appropriate Assessment". These stages are described in Table 2-1.

Table	2-1:	HRA	Process
-------	------	-----	---------

Stage/Task	Description
HRA Task 1 Screening	This process identifies the likely impacts upon a European site of a project or plan, either alone or in-combination with other projects or plans, and determines whether these impacts are likely to be significant.
HRA Task 2 Appropriate Assessment	This assessment determines whether a project or plan would have an adverse impact on the integrity of a European site, either alone or incombination with other projects or plans. This assessment is confined to the effects on the internationally important habitats and species for which the site is designated.
	If no adverse impact is determined, the project or plan can proceed. If an adverse impact is identified, Task 3 is commenced.
HRA Task 3 Mitigation and Alternatives	Where a plan or project has been found to have adverse impacts on the integrity of a European site, potential mitigation measures or alternative options should be identified.
	If suitable mitigation or alternative options are identified that result in there being no adverse impacts from the project or plan on European sites, the project or plan can proceed.
	If no suitable mitigation or alternative options are identified, as a rule the project or plan should not proceed. However, in exceptional circumstances, if there is an 'imperative reason of overriding public interest' for the implementation of the project or plan, consideration can be given to proceeding in the absence of alternative solutions. In this case, compensatory measures must be put in place to offset negative impacts.

Other guidance documents have been used to help inform the methodology of this assessment including:

- Assessment of Plans and Projects Significantly Affecting Natura 2000 Sites: Methodological Guidance on the Provisions of Article 6(3) and (4) of the Habitats Directive 92/43/EEC (European Commission 2002)
- The Habitats Regulations Assessment Handbook. DTA Publications

- Managing Natura 2000 sites: The provisions of Article 6 of the 'Habitats' Directive 92/43/EEC (European Communities, 2018)
- Guidance document on Article 6(4) of the 'Habitats Directive' 92/43/EEC (European Communities, 2007)
- The National Planning Policy Framework (2019) (NPPF) and National Planning Practice Guidance (NPPG)
- The Planning Inspectorate PINS Note 05/ 2018: Consideration of avoidance and reduction measures in Habitats Regulations Assessment: People over Wind, Peter Sweetman, v Coillte Teoranta (The Planning Inspectorate, 2018).
- NEA001 Natural England's approach to advising competent authorities on the assessment of road traffic emissions under the Habitats Regulations (Natural England, 2018).

#### 2.3 HRA Stage 1: Screening Methodology

The principles of 'screening' are applied to a plan or its components (i.e. policies and site allocations) to allow the assessment stage to focus on those aspects that are most likely to have potentially significant or adverse effects on European sites, as well as shape the emerging strategy. Screening aims to determine whether the plan will have any 'likely significant effects' on any European site as a result of its implementation. It is intended to be a coarse filter for identifying effects (positive and negative) that may occur, to allow the assessment stage to focus on the most important aspects. A plan should be considered 'likely' to have an effect if it is not possible (on the basis of objective information) to exclude the likelihood that the plan could have significant effects on any European site, either alone or incombination with other plans or projects; an effect will be 'significant' if it could undermine the site's conservation objectives.

Screening can be used to 'screen-out' European sites and plan components from further assessment, if it is possible to determine that significant effects are unlikely (e.g. if sites or interest features are clearly not vulnerable (exposed and/or sensitive) to the outcomes of a plan due to the absence of any reasonable impact pathways).

In order to undertake screening of the Local Plan SADPD, it is necessary to:

- Identify the European sites within and outside the plan area likely to be affected, reasons for their designation and their conservation objectives
- Describe the plan/strategy and their aims and objectives and also those of other plans or projects that in-combination have the potential to impact upon the European sites
- Identify the potential effects on the European sites
- Assess the significance of these potential effects on the European sites.

#### 2.3.1 The Precautionary Principle

If there is uncertainty, and it is not possible, based on the information available, to confidently determine no significant effects on a site then the precautionary principle will be applied, and the plan will be subject to an appropriate assessment (HRA Task 2).

#### 2.3.2 Mitigation, Avoidance and Protective Measures

Following the *People over Wind & Sweetman v Coillte Teoranta* Case C-323/17, the assessment does not consider protective, avoidance or mitigation measures for

stage 1 Screening. These measures are carried forward and considered as part of the stage 2 Appropriate Assessment.

#### 2.4 HRA Stage 2: Appropriate Assessment Methodology

#### 2.4.1 Appropriate Assessment and Mitigation – HRA Tasks 2 and 3

For those European sites screened into the HRA, it is necessary to undertake an Appropriate Assessment to explore the potential adverse effects on their integrity and develop measures to avoid these effects entirely, or if not possible, to mitigate the impacts sufficiently that effects on the European sites are rendered effectively insignificant.

The stages involved in the Appropriate Assessment are to:

- Explore the reasons for the European designation of the "screened in" European sites
- Explore the environmental conditions required to maintain the integrity of the "scoped in" European sites and become familiar with the current trends in these environmental processes
- Gain a full understanding of the SADPD and consider each within the context of the environmental processes would the policies lead to an impact on any identified process?
- Decide whether the identified impact will lead to an adverse effect on the integrity of the European site
- In reference to the recent ECJ case C-462/17 (Nov 18) Holohan v An Bord Pleanala, the Appropriate Assessment needs to include all typical habitats and species present within and outside of the boundaries of the European site, if they are necessary for the conservation of the habitats and species listed for the protected area.
- Identify other plans that might affect these European sites in combination with the SADPD and decide whether there are any adverse effects that might not result from the strategy in isolation will do so in-combination.
- Develop measures to avoid the effect entirely, or if not possible, to mitigate the impact sufficiently such that its effect on the European site is rendered effectively insignificant.

In evaluating significance, JBA Consulting has relied on its professional judgement, which will be further reinforced through consultation with Natural England, through the development of the SADPD and its associated appraisal processes.

#### 2.5 Consultation

The HRA documents prepared to support the First Draft SADPD and initial Publication Draft SADPD have been subject to consultation with all statutory consultees and the general public. Any comments have been considered within this HRA for the Revised Publication Draft of the SADPD.

# 3 European Sites

#### 3.1 Introduction

European sites are often collectively known as Natura 2000 sites. Natura 2000 is an EU-wide network of nature protection areas established under the Habitats Directive. The aim of the network is to assure the long-term survival of Europe's most valuable and threatened habitats and species.

Natura 2000 consists of:

- Special Areas of Conservation (SACs) these are designated under the Habitats Directive to protect those habitat types listed on Annex I and species listed on Annex II that are considered to be most in need of conservation at a European level (excluding birds).
- Special Protection Areas (SPAs) these are designated under the Birds Directive to protect rare and vulnerable birds, and also regularly occurring migratory species
- *Ramsar sites* these are wetlands of international importance designated under the Ramsar Convention.

*Possible SACs (pSACs)* and *potential SPAs (pSPAs)* are given the same protection under the National Planning Policy Framework (NPPF, 2019), following a precautionary approach.

All SPAs and terrestrial SACs in England and Wales are also designated as Sites of Special Scientific Interest (SSSIs) under the Wildlife and Countryside Act (1981, as amended).

Although not included in the European legislation, as a matter of Government policy, Ramsar sites in England and Wales are protected as European sites. The clear majority are also classified as SPAs and SSSIs.

#### **3.2 European Sites In and Around Cheshire East**

Best practice guidance suggests that sites occurring within a wider area of approximately 10km to 15km from the boundary of the area directly affected by a plan should be identified and assessed, in addition to those sites located within the plan area (Therivel, 2009). However, it is important to consider the possibility of impacts for any European site that might be affected, whatever its location, given the activities included in the plan and their range of influence. This may extend some distance from the area within the immediate influence of a plan.

There are two SACs, one SPA and three Ramsar sites located within Cheshire East. A further eight SACs, three SPAs and three Ramsar sites located adjacent to Cheshire East have been deemed to be within the influence of the Cheshire East Local Plan SADPD. These sites are listed in Table 3-1 and shown at Appendix A.

It should be noted that a number of individual sites (designated as SSSIs) make up the West Midland Mosses SAC, Midland Meres and Mosses Phase 1 Ramsar and Midland Meres and Mosses Phase 2 Ramsar sites (as listed in the table at Appendix B). The map at Appendix A shows those component sites that have been deemed to be within the influence of the SADPD.

Designation	Within Cheshire East	Adjacent to Cheshire East and deemed to be within the influence of the Local Plan SADPD
SAC	West Midlands Mosses South Pennines Moors	West Midlands Mosses South Pennine Moors Rixton Clay Pits Brown Moss Manchester Mosses Oak Mere Fenn's, Whixall, Bettisfield, Wem and Cadney Mosses Peak District Dales River Dee and Bala Lake Dee Estuary
SPA	Peak District Moors (South Pennines Moors Phase 1)	Peak District Moors (South Pennine Moors Phase 1) Mersey Estuary Dee Estuary Mersey Narrows and North Wirral Foreshore
Ramsar	Midland Meres and Mosses Phase 1 Midland Meres and Mosses Phase 2 Rostherne Mere	Midlands Meres and Mosses Phase 1 Midlands Meres and Mosses Phase 2 Mersey Estuary Dee Estuary Mersey Narrows and North Wirral Foreshore

#### Table 3-1: European Sites Within and Adjacent to Cheshire East

Data on the European site interest features, their distribution, and their sensitivity to potential effects associated with the plan were obtained from various sources and reports, including the Joint Nature Conservation Committee (JNCC) and Natural England websites (citations, boundaries, management plans, site improvement plans etc).

Detailed information on these sites, including their qualifying features and conservation objectives are provided in Appendix B.

#### **3.3 Potential Hazards to European Sites**

#### 3.3.1 Introduction

Development for housing, business and associated infrastructure can potentially have adverse impacts on the habitats and species for which European sites are designated. These impacts can be direct, such as habitat loss, fragmentation or degradation, or indirect such as disturbance or pollution from construction, transportation etc.

This section identifies the potential hazards to European sites within and adjacent to Cheshire East and then goes on to identify the types of hazards to which the qualifying features that are present within the sites are particularly sensitive.

JBA

#### **3.3.2 Hazards to Sites**

The European sites within and adjacent to Cheshire East are mostly comprised of river, estuary and other wetland sites (i.e. meres and mosses) and therefore the hazards identified in Table 3-2 are based on those identified in the Environment Agency's EU Habitats Directive Handbook, however local conditions have also been considered during the hazard identification process.

#### Table 3-2: Potential Hazards to European sites

Potential Hazard	Description
Habitat loss	This is a loss of habitat within the designated boundaries of a European site – it is expected that there would be no direct loss to development as a result of implementation of the SADPD.
Habitat fragmentation	This is where activities result in the separation of available habitats or split extensive areas of suitable habitat. Most likely to affect species.
Changes in physical regime	These are changes to physical process that will alter the present characteristics of the European site e.g. fluvial and geomorphological processes, erosion processes, deposition.
Physical damage	This includes recreational pressures such as trampling and erosion, and where sites are close to urban areas, other damaging activities may occur such as rubbish tipping, vandalism, arson, and predation, particularly by cats.
Habitat/community simplification	Changes to environmental conditions, due to human activities, which result in a reduction and fragmentation of habitats that will reduce biodiversity.
Disturbance (noise, visual)	Activities that result in disturbance, causing sensitive birds and mammals to deviate from their normal, preferred behaviour, such as construction, recreational, traffic.
Competition from invasive non- native species	Activities may cause the introduction or spread of invasive non-native animals and plants, which could result in changes to community composition and even to the complete loss of native communities.
Changes in water levels or tables	Activities that may affect surface and groundwater levels, such as land drainage and abstraction, may have adverse impacts on water dependant habitats and species.
Changes in water quality	Activities that may impact upon water quality, such as accidental pollution spills, run-off from urban areas, nutrient enrichment from agriculture, and discharge from sewage works, may adversely affect wetland habitats and species.
Changes to surface water flooding	Activities that may result in a reduction or increase in the frequency and extent of surface water flooding, which may affect riverine and floodplain habitats
Turbidity and siltation	Increases in turbidity within water environments can impact upon aquatic plants, fish and wildfowl due to sedimentation and reduction in penetrable light.
Pollution	Activities that may lead to the release of pollutants to the air such as oxides of nitrogen, oxides of sulphur or ammonia, or pollutants deposited on the ground through acidification or terrestrial eutrophication via soil (deposition of nitrogen).

#### 3.3.3 Qualifying Features and Sensitivity to Hazards

Table 3-3 shows the qualifying features of the European sites within and adjacent to Cheshire East and identifies the hazards to which they are most sensitive. Their

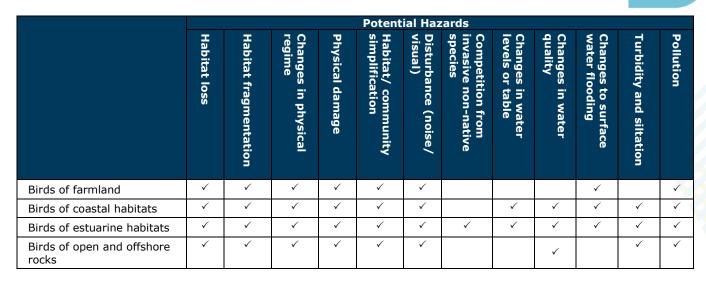

qualifying features have been grouped based on guidance from the Environment Agency (2013) to facilitate the sensitivity assessment.

It must be noted that during the assessment of the potential impacts of the SADPD on a European site, all of the potential hazards will be considered.

#### 3.4 **Potential Impact Pathways**

#### 3.4.1 Introduction

The SADPD and other identified plans have the potential to cause a number of direct and indirect effects on European sites via one or more pathways. Such potential effects include long-term effects associated with the operational phase of proposed developments or general population growth, and short-term effects arising from the development construction phases. The main potential effects are described below.

#### 3.4.2 Recreational Impacts

Increased recreational pressures from urban populations, including dog walking, jogging, cycling, horse riding, motorbike scrambling, boating and other waterbased recreational activities are likely to result from new housing developments and population increases.

The population of Cheshire East is expected to grow by around 58,100 people between 2010 and 2030. This is approximately a 15.7% increase in population. During this period, it has been estimated that there will be a significant increase in the proportion of the population above the retirement age (the number of people aged 65 and over will increase by around 65%) (Cheshire East Council,  $2017^{b}$ ). This is the section of the population with the greatest amount of leisure time.

Improved access to the countryside and increased tourism will also attract more visitors to the area as well as residents. This can lead to significant pressures on sensitive habitats resulting in damage and disturbance to the species they support. Typical impacts of tourism and recreation include:

- Physical damage, for example from trampling and erosion
- Disturbance to species, such as ground-nesting birds and wintering wildfowl, from walking, cycling and water sports, resulting in displacement, increased mortality and impacts on nesting success.
- Air pollution (dealt with under air quality effects below) and disturbance from traffic
- Disturbance from dogs and damage from dog excrement.

In addition, where sites are close to urban areas and new developments, recreational pressures can be exacerbated by other damaging activities such as rubbish tipping, vandalism, arson, and predation, particularly by cats.

JBA

Many European sites will be vulnerable to some degree of impact as a result of recreational pressure, although the effects of recreational impacts are complex and very much dependent on the specific conditions and interest features at each site. For example, some bird species are more sensitive to disturbance associated with walkers or dogs than others; some habitats will be more sensitive to trampling than others; and some sites will be more accessible than others.

Most recreational activities with the potential to affect European sites are 'casual' and pursued opportunistically (e.g. walking, walking dogs, riding) which makes it difficult to quantify or predict the impacts of these activities on European sites and harder to control or manage. It also means it is difficult to explore in detail all potential impacts of recreational pressures at the strategic level. However, it is possible for plans and strategies to influence recreational use of European sites through the planning process, for example by increasing the amount of green/open space and leisure/recreational facilities required within or near developments if potentially vulnerable European sites are located nearby.

The screening assessment will consider the potential for recreational pressures on a European site by taking into consideration the vulnerability of their interest features to such pressures, the accessibility of the site to the public, the likely attractiveness of the site and its habitats/species to visitors, and the proximity of the site to sites allocated for development.

#### **3.4.3 Hydrological Impacts**

New development and population increase can result in hydrological effects to existing watercourses and groundwater resources. Such effects can include changes to surface and ground water flows, quality and levels; this can have subsequent effects on habitats and supported species. The main types of potential hydrological effects are as follows:

- Water abstraction new developments would increase the demand for water resulting in increased levels of water abstraction and subsequently affect surface and/or ground water flow, quality and levels. Any such effects would be more extreme during the summer as water demand will peak at this time. The assessment of potential effects of increased water demand will consider how the public water supply system operates and how it is regulated with other water-resource consents.
- Water discharges new developments could result in an increase in discharges to water via foul and surface water/storm water drainage (flood risk). This could also occur during construction phases (e.g. oil spillage or other pollution incidents from construction plant and machinery) but would be short-term and of reduced significance. Discharges can also occur during the operational phase of works through the increased use of waterways by motor powered boats and oil from a higher number of cars using roads close to the watercourse network. Such discharges can impact on surface water and ground water quality, quantity and flows. The water quality effects of the plan are likely to be either controlled by existing consent regimes (which must undergo HRA) or have diffuse 'in-combination' effects that are difficult to quantify and therefore any assessment must focus on the development of suitable mitigating policy that will minimise the impacts of development on water quality.

The screening assessment will consider the potential for impacts on a European site due to changes in water levels and/or quality by taking into consideration the vulnerability of their interest features to such impacts, and the pathways i.e. the

hydrological connectivity between the site and the areas proposed for development.

In line with the *People over Wind & Sweetman v Coillte Teoranta* Case C-323/1, policy or proposal-level protective and mitigation measures relating to water abstraction and/or water discharges will only be considered at the appropriate assessment stage of this HRA.

#### 3.4.4 Air Quality Effects

New developments and an increase in population have the potential to result in an increased use of the road network by vehicles, which could have adverse effects on air quality. This could have subsequent effects on habitats sensitive to air quality changes and higher deposits of nitrogen dioxide, particulates and sulphur dioxide (diesel trains) such as the West Midlands Mosses SAC, and Midland Meres and Mosses Phase 1 and Phase 2 Ramsar sites. For example, there is the potential for effects on the health of Sphagnum (which is critical to the ability of the degraded raised bog to re-establish actively growing peat within the site).

It should be noted that the likelihood of this effect is greatly reduced as the distance increases between the deposit area (typically the road network) and the European site. The Design Manual for Roads and Bridges (DMRB) LA 105 document on Air Quality (formerly HA 207/07, IAN 170/12, IAN 174/13, IAN 175/13, part of IAN 185/15) states that designated sites within 200m should be included in an air quality assessment; pollution typically falls back to baseline levels beyond this distance from the road network (Highways Agency, 2019).

In addition, the clear majority of new vehicles on the road generally emit fewer emissions than older vehicles. This has become more apparent over the last 5 years as the car industry has responded to increasing climate change (carbon reduction) pressures (SMTT, 2017). Road tax bands were also amended by the Government in 2009 to ensure that the most polluting cars are penalised more heavily than previously. These measures have helped to increase the demand for cleaner more fuel-efficient vehicles; this trend will only increase further in the future as cars continue to become even greener.

This assessment will consider how the potential impact of new development/housing and the associated increase in traffic has the potential to generate increases in atmospheric pollution. This will be considered in relation to the European sites identified, taking into account the vulnerability of their interest features, proximity to proposed development sites and likely associated traffic increases.

This assessment takes into account the High Court judgment in Wealden v SSCLG [2017] ('the Wealden Judgment 2017') and Natural England's guidance on significance thresholds in relation to traffic emissions for roads within 200m of European Sites (Natural England, 2018).

## 4 Relevant Plans

This section gives a brief description of the development policies and site allocations within the SADPD and outlines how these may impact upon the European sites identified in Table 3-1. The HRA should be read in conjunction with the SADPD document where more specific details about the policies and site allocations can be found.

The Habitats Regulations also require that the potential effects of the plan on European sites must be considered 'in-combination with other plans or projects'. The 'in-combination' assessment must also consider within-plan effects (i.e. between policies or strategic sites). Consideration of 'in-combination' effects is not a separate assessment but is integral to the screening and appropriate assessment stages, and the development of avoidance/mitigation measures. There is limited guidance available on the scope of the 'in-combination' element, particularly which plans should be considered. However, the assessment should not necessarily be limited to plans at the same level in the planning hierarchy and there is consequently a wide range of plans that could have potential 'in-combination' effects with the Local Plan SADPD due to its regional scale. This section, therefore, also identifies the other plans and projects that it is considered could potentially act 'in-combination' with the Local Plan SADPD to have 'significant effects' on European sites.

#### 4.1 Cheshire East Local Plan

#### 4.1.1 Introduction

The Local Plan is the Statutory Development Plan for Cheshire East and is the basis for determining planning applications. The SADPD is the second part of the Local Plan (intended as a 'daughter' document) and follows the strategic lead of the Local Plan Strategy. The SADPD sets non-strategic detailed policies to guide planning application decisions in the Borough and makes allocations, where necessary. The vision for the future of Cheshire East is to deliver sustainable, jobsled growth and sustainable, vibrant communities.

The first part of the Local Plan was the LPS, which sets out the overall vision and planning strategy for development in the Borough and contains planning policies to ensure that new development addresses the economic, environmental and social needs of the area. It also identifies strategic sites and strategic locations that will accommodate most of the new development needed.

The third aspect of the Local Plan will be the Minerals and Waste Development Plan Document; however, this is still in development and is not yet available for assessment. The Crewe Hub Area Action Plan is being prepared and has been supported by HRA reports, where necessary.

#### 4.1.2 Development Policies

The SADPD sets out more detailed policies to inform planning application decisions in the Borough, including the establishment and / or revision of boundaries around settlements to guide the location of new development.

#### 4.1.3 Site Allocations

Local residents, landowners, developers and other parties were invited to put forward sites to the Council for consideration as suitable sites for future development in the Borough. Sites are intended to be allocated in the SADPD to assist in meeting the overall development requirements set by the LPS, where

necessary. Potential Gypsy and Traveller and Travelling Showperson sites are also considered in the SADPD.

There are a number of stages and evidence-based documents utilised to identify the list of sites proposed to be allocated in the SADPD. A site selection methodology [ED 07] has been prepared that sets out the various stages used to select sites, informed by the outcomes of the HRA. Individual settlement reports [ED 21 - ED 46] have been prepared to set out the approach to development and the consideration of sites. A Sustainability Appraisal [ED 03] has also been prepared and includes a summary of the reasons for selection or rejection of each parcel of land from the initial pool of sites considered available for development. Although not the sole basis for progression or non-progression of site allocations, the Sustainability Appraisal has formed part of the evidence base used for the options appraisal (Cheshire East Council, 2020<sup>a</sup>).

#### 4.2 Other Relevant Plans and Projects that Might Act In-Combination

A series of individually modest effects may in-combination produce effects that are likely to adversely affect the integrity of one or more European sites. Article 6(3) of the Habitats Directive tries to address this by taking into account the combination of effects from other plans or projects. The Directive does not explicitly define which other plans and projects are within the scope of the combination provision. Guidance in section 4.4.3 of 'Managing Natura 2000 Sites: The provisions of Article 6 of the 'Habitats' Directive 92/43/EEC', published by the European Commission, states:

'When determining likely significant effects, the combination of other plans or projects should also be considered to take account of cumulative impacts. It would seem appropriate to restrict the combination provision to other plans or projects which have been actually proposed.'

There is limited guidance available on the scope of the 'in-combination' element, particularly which plans or projects should be considered. The plans identified by the Sustainability Appraisal (Cheshire East Council, 2020<sup>a</sup>) provided the basis for the assessment of 'in-combination' effects for plans. These plans were reviewed to identify any potential effects and these were then considered (as necessary) within this screening report. Attention was focused on those aimed at delivering planned spatial growth with the most significant being those that seek to provide housing, employment and infrastructure. The assessment did not include national plans/strategies, policy or legislation since the Local Plan must be compliant with these. It is considered that in-combination effects are most likely in respect of other regional and sub-regional development plans and strategies.

The review considered the most relevant plans and projects of this nature of Cheshire East and neighbouring authorities, along with relevant Water Resource Management Plans and Catchment Abstraction Management Plans. The largest and most relevant projects are initially with the potential to act in-combination with the SADPD. These include the major infrastructure projects being undertaken in Cheshire East (Cheshire East Council, 2020<sup>b</sup>), as well as HS2 (Gov.UK, 2017). Where relevant, other smaller-scale projects have also been assessed.

The Minerals and Waste Development Plan Document and the Crewe Hub Area Action Plan are still in development and are therefore not yet available for assessment with regards to in-combination effects. However, HRA will be undertaken for these plans and in-combination effects with the SADPD will be considered as part of these assessments.

Table 4-1 lists the relevant plans and projects that have been identified as having the potential to result in adverse effects on European sites in-combination with the

Local Plan SADPD, further detail is provided at Appendix C and Appendix D. It should be noted that the Cheshire East LPS has been through the HRA process. Based on the mitigation measures in place for the LPS, none of the Local Plan Policies or Strategic Sites and locations will have a significant impact upon any European site. Parts 1 and 2 of the Local Plan are designed to complement each other, and no in-combination likely significant effects will result from the two separate parts of the Local Plan.

## 5 Screening Assessment

#### 5.1 Introduction

This section considers the development policies and site allocations listed in the SADPD and identifies whether or not they are likely to have significant effects on European sites, either alone or in-combination with other plans and projects.

### 5.2 Development Policies

The development policies have initially been screened following the methodology set out in DTA Publications Habitats Regulations Assessment Handbook (DTA, 2019). Each policy is allocated one or more screening category, shown in Table 5-1 below. The results of the initial screening are shown in Table 5-2. Where a number of categories to screen out a policy are applicable, the most relevant categories are listed in the table. Any policies with likely significant effects and any in-combination effects are further discussed in Table 5-3 where appropriate. The screening outcome in Table 5-2 includes any relevant in-combination assessment outcomes. Where the outcome is marked with an asterisk, no in-combination assessment is necessary because the policy has zero impact alone on any European Sites.

# Table 5-1: Screening categories for the development policies (adapted from DTA,2018)

Screening Category	Description	Screening Outcome
Α	General statement of policy/general aspiration.	Out
В	Policy listing general criteria for testing the acceptability/sustainability of proposals.	Out
С	Proposal referred to but not proposed by the plan.	Out
D	Environmental Protection/site safeguarding policy.	Out
E	Policies or proposals that steer change in such a way as to protect European sites from adverse effects.	Out
F	Policy that cannot lead to development or other change.	Out
G	Policy or proposal that could not have any conceivable effect on a European site.	Out
Н	Policy or proposal, the actual or theoretical effects of which cannot undermine the conservation objectives (either alone or in combination with other aspects of this or other plans or projects).	Out
I	Policy or proposal with a likely significant effect on a site alone.	In
]	Policy or proposal with an effect on a site but not likely to be significant alone, so need to check for likely significant effects in combination.	Dependant on in- combination test
К	Policy or proposal not likely to have a significant effect either alone or in combination.	Screened out after in-combination test
L	Policy or proposal likely to have a significant effect in combination.	Screened in after in- combination test.

## Table 5-2: Screening table for Cheshire East development policies

\* indicates policies where no in-combination assessment is necessary because there are zero impacts alone resulting from this policy

Policy no.	Policy title	Screening Category/Other notes	Screening Outcome
Chapter	2: Planning for Gro	owth	
PG 8	Development at Local Service Centres	<ul> <li>K Policy or proposal not likely to have a significant effect either alone or in combination.</li> <li>The local service centres are expected to accommodate in the order of 7ha of employment land and 3,500 new homes. The overall level of development for local service centres identified in the LPS (Policy PG 7) can now largely be met from the developments already completed during the plan period as well as proposed developments with planning permission. It is expected that the housing element will be addressed by windfall going forward, in line with other policies in the Local Plan.</li> <li>Please refer to Table 5-3 for analysis of sites considered through the SADPD (in local service centres) that are considered in the initial site screening. With the exception of a potential employment allocation at Holmes Chapel (HCH 1), all other relevant settlements are considered to have no potential impacts upon any European sites. HCH 1 is considered further in the screening assessment (Table 5-5) in relation to potential impacts upon Midland Meres and Mosses Phase 1 Ramsar (component site Bagmere SSSI), but no likely significant affects are identified.</li> </ul>	Out
PG 9	Settlement boundaries	<ul> <li>B Policy listing general criteria for testing the acceptability/sustainability of proposals.</li> <li>H Policy or proposal, the actual or theoretical effects of which cannot undermine the conservation objectives (either alone or in-combination with other aspects of this or other plans or projects). This policy specifically refers to not allowing for conflict with any other relevant policy within the local plan. All development will therefore be required to follow the mitigation hierarchy for biodiversity (ENV 2), which is in keeping with the principles of the HRA process.</li> <li>K Policy or proposal not likely to have a significant effect either alone or in combination.</li> </ul>	Out
PG 10	Infill villages	<ul> <li>B Policy listing general criteria for testing the acceptability/sustainability of proposals.</li> <li>Policy wording looks to limit unacceptable impacts on any potential developments within infill villages.</li> <li>K Policy or proposal not likely to have a significant effect either alone or in combination.</li> </ul>	Out

#### 5.3 Site Allocations

Table 5-3 summarises the sites being considered through stage 4 onwards of the Council's Site Selection Methodology (SSM) and provides a preliminary outline of the potential for each site being considered to impact upon European sites, taking into account the location of the potential site allocation in relation to each of the European sites. This table includes both potential site allocations (prefixed with SUB, FDR or CFS) as well as potential Gypsy and Traveller and Travelling Showperson sites (prefixed with GTTS). Employment allocations, as outlined SADPD Policy EMP 2 are also considered. This is a high-level screening assessment, taking into account the location of the European sites in relation to the sites being considered for allocation. This information is used to support the overall screening assessment (Table 5-5).

Further details of the site allocations can be seen in the Local Plan SADPD as well as settlement reports (ED 21 to 44) & documents ED 12 (employment allocations review) and ED 14 (Gypsy and Traveller and Travelling Showperson site selection report). These documents should be read in conjunction with this HRA. It should be noted that although all the sites that make it to stage 4 of the site selection methodology are considered in this document and within the HRA, not all sites will be carried forward for final selection and development.

Taking into account the location of the European sites in relation to the sites being considered for allocation (Table 5-3 and 5-4), the identified potential hazards and impact pathways associated with the developments, an assessment has been made as to whether the Local Plan SADPD, either alone or in-combination with other plans, will have likely significant effects on any European sites. This assessment is detailed in Table 5-5. Any relevant policies or site allocations that are considered to require further assessment in Table 5-2 or Table 5-3 are identified and considered in this table. For European sites covering several locations, this column also indicates which component SSSI site is considered to potentially be impacted upon.

It should be noted that potential impacts from other plans and projects are only considered in the screening assessment where there is no likely significant effect on a designated site from the Local Plan SADPD alone.

# Table 5-3: Summary of site options and GTTS sites being considered in the development of the Cheshire East Local Plan SADPD and initial screening.

Site Option	Description	Use		Potential Impact on European Sites		
		Residential	Employment	Retail	Other

Table 5-3 (summary of site options) has informed the SADPD site selection process on an iterative and ongoing basis. The high-level HRA screening assessment (taking into account the location of the European sites in relation to the sites being considered for allocation), when considered alongside other suitability and achievability factors in the site selection process, has been used to inform decisions on which allocations are proposed to be brought forward in the SADPD.

Table 5-4 (below) sets out the list of proposed SADPD allocations (including safeguarded land designation), and also highlights those sites where a potential impact on a European site has been identified.

## Table 5-4: Proposed SADPD allocations and potential for impacts onEuropean Sites

Settlement	Site Allocations and Development Policies Document Reference	Other Site Reference	Site Name	Potential Impact on European Site
Crewe	CRE 1	CFS 634	Land at Bentley Motors	No

	EMP 2.8		Land West of Manor Lane, Holmes Chapel	No
	EMP 2.9		Land at Faulkner Drive, Middlewich	No

Where there has been a potential impact on a European site identified in Table 5-4 (above), the site allocation will be considered in further detail through the remaining stages of the assessment (and outcomes documented in this report).

Table 5-5 (below) highlights the assessment of likely significant effects on European Sites (sites in the borough and within 10-15 km of the borough boundary) taking account of the relevant sites and policies identified in Table 5-2 (summary policy assessment) and tables 5-3 / 5-4 (site assessment).

### Table 5-5: Assessment of Likely Significant Effects on European sites

N.b. Where this table refers to sites being 'considered for allocation', this describes sites considered for allocation and / or those being considered as safeguarded land.

Designated Site (including component SSSIs likely to be	Potential Hazards	Relevant Policy / Site being	Potential hazard impact pathw	vays		Potential in-combination effects with other plans or projects (if applicable) *	Screening assessment	
impacted upon, where applicable).		considered in the assessment	Recreational	Hydrological	Air quality			
West Midlands Mosses SAC Qualifying features: Standing waters (sensitive to acidification) Bogs and wet habitats Wybunbury Moss SSSI	Changes in water quality Changes in water levels or table Pollution (air) Physical damage (due to recreational pressures)	Wybunbury Moss SSSI: CRE 2	CRE 2 is proposed as an owner expansion site for B1 and B8 employment uses. No increased recreational impacts are anticipated as a result of this employment site. <i>No likely significant effect</i> There are no conceivable recreational impacts upon any other constituent SSSIs within the West Midlands Moses SAC as a result of the SADPD. <i>No likely significant effect</i>	The potential for adverse effects due to changes in water levels and/or quality is highly unlikely due to the distance (more than 1.5 km) of the SAC from the closest site being considered for allocation and the lack of hydrological connectivity between any constituent SSSIs forming the European site and any site allocations proposed in the SADPD. <i>No likely significant effect</i>	Some sections of road within the vicinity of West Midlands Mosses SAC (component site Wybunbury Moss SSSI) fall within 200m of the SAC and therefore may impact on air quality at the SAC should vehicle usage increase associated with the potential allocated sites (DMRB LA 105). However, any potential increase in traffic on the main road through Wybunbury as a direct result of the potential site allocation CRE 2 which is 3.2km from the SAC, or any site allocations further afield, are expected be negligible. CRE 2 is located 3.2km from Wybunbury Moss SSSI and is within the Natural England Impact Risk Zone for air pollution for any industrial/agricultural development (including: industrial processes, livestock & poultry units with floorspace > 500m <sup>2</sup> , slurry lagoons > 750m <sup>2</sup> & manure stores > 3500t). CRE 2 will be limited to B1 and B8 uses and therefore is not likely to involve industrial or agricultural processes that could lead to air quality impacts upon Wybunbury Moss SSSI. <i>No likely significant effect</i>	The Local Plan SADPD is unlikely to have significant adverse effects on the West Midland Mosses SAC in-combination with any other relevant plans or projects. <i>No likely significant effect</i>	No likely significant effect. Screened out.	
South Pennine Moors SAC Qualifying features: Bogs and wet habitats Fens and wet habitats Dry heathland habitats Dry woodlands and scrub	Changes in water quality Changes in water levels or table Pollution (air) Physical damage (due	None	It is unlikely that any sites being considered for potential allocation in the SADPD will result in recreational/ disturbance impacts that extend as far as the South Pennine Moors SAC; all potential allocated sites are more than	The potential for adverse effects due to changes in water levels and/or quality is highly unlikely due to the distance (more than 5km) of the SAC from any potential allocated site within the SADPD, and the lack of	The potential for adverse effects on the South Pennine Moors SAC due to air pollution from increased vehicles associated with the potential site allocations using the local road and motorway network is unlikely. This is due to the distance of the SAC from the main	The Local Plan SADPD is unlikely to have significant adverse effects on the South Pennine Moors SAC in-combination with any other relevant plans or projects. <i>No likely significant effect</i>	No likely significant effect. Screened out	

Designated Site (including component SSSIs likely to be	Potential Hazards	Relevant Policy / Site being	Potential hazard impact pathw	vays		Potential in-combination effects with other plans or projects (if applicable) *	Screening assessment
impacted upon, where applicable).		considered in the assessment	Recreational	Hydrological	Air quality		
	to recreational pressures)		5km from this SAC. <i>No likely significant effect</i>	hydrological connectivity with any watercourses that could be affected by development. <i>No likely significant effect</i>	road network, as pollutant levels can be expected to be expected to fall to background levels at a distance of more than 200m (DMRB LA 105). <i>No likely significant effect</i>		
<b>Rixton Clay Pits SAC</b> <i>Qualifying features:</i> Amphibia (Great Crested Newt <i>Triturus cristatus)</i>	Changes in water quality Changes in water levels or table Physical damage (due to recreational pressures)	None	It is unlikely that the development of any of the sites being considered for potential allocation in the SADPD will result in recreational/ disturbance impacts that extend as far as Rixton Clay Pits SAC; the closest site being considered for allocation is more than 13km from the SAC. <i>No likely significant effect</i>	The potential for adverse effects due to changes in water levels and/or quality is highly unlikely due to the distance (more than 13km) of the SAC from any potential allocated site within Cheshire East, and the lack of hydrological connectivity with any watercourses that could be affected by development. <i>No likely significant effect</i>	The potential for adverse effects due to air quality changes from increased traffic associated with new development at the potential site allocations is highly unlikely due to the distance of the SAC (more than 13km) from any site being considered for potential allocation within Cheshire East. <i>No likely significant effect</i>	The Local Plan SADPD is unlikely to have significant effects on Rixton Clay Pits SAC in- combination with any other relevant plans or projects. <i>No likely significant effect</i>	No likely significant effects. Screened out.
<b>Brown Moss SAC</b> <i>Qualifying features:</i> Vascular plants of aquatic habitats (Floating Water Plantain <i>Luronium natans</i> )	Changes in water quality Changes in water levels or table Physical damage (due to recreational pressures)	None	It is unlikely that development of any of the sites being considered for potential allocation in the SADPD will result in recreational/ disturbance impacts that extend as far as Brown Moss SAC; the closest site being considered for allocation is more than 13 km from the SAC. <i>No likely significant effect</i>	The potential for adverse effects due to changes in water levels and/or quality is highly unlikely due to the distance (more than 13km) of the SAC from any potential site allocation within Cheshire East, and the lack of hydrological connectivity with any watercourses that could be affected by development. <i>No likely significant effect</i>	The potential for adverse effects due to air quality changes from increased traffic associated with new development is highly unlikely due to the distance of the SAC (more than 13km) from any sites being considered for allocation within Cheshire East and due to the distance of the SAC from the main road network. Pollutant levels can be expected to fall substantially at a distance less than 50m from the source and can be expected to fall to background levels at a distance of more than 200m (DMRB LA 105). <b>No likely significant effect</b>	The Local Plan SADPD is unlikely to have any significant effects on Brown Moss SAC in- combination with any other relevant plans or projects. <i>No likely significant effect</i>	No likely significant effects. Screened out.
Manchester Mosses SAC Qualifying features: Bogs and wet habitats	Changes in water quality Changes in water levels or table Pollution (air) Physical damage (due to recreational	None	It is unlikely that the development of any of the sites being considered for potential allocation in the SADPD will result in recreational/ disturbance impacts that extend as far as Manchester Mosses SAC; the closest site being considered for allocation is more	The potential for adverse effects due to changes in water levels and/or quality is highly unlikely due to the distance (more than 15km) of the SAC from any potential allocated site within Cheshire East, and the lack of hydrological	The potential for adverse effects on Manchester Mosses SAC due to air pollution from increased vehicles associated with the potential site allocations using the local road and motorway network is unlikely. This is due to the distance of the SAC from the main road network, as pollutant levels can be expected to	Manchester Mosses SAC is considered in the HRA screening report for HS2 (cited in Temple- ERM, 2013). Although the HRA will require future updates, the initial report screens out any likely significant effects upon this SAC. The potential impact mechanisms discussed in the	No likely significant effects. Screened out.

Designated Site (including component SSSIs likely to be impacted upon, where applicable).	Potential Hazards	Relevant Policy / Site being	Potential hazard impact pathw		Potential in-combination effects with other plans or projects (if applicable) *	Screening assessment	
		considered in the assessment	Recreational	Hydrological	Air quality		
Criteria 2 - Supports a number of rare species of olants associated with vetlands including five nationally scarce species ogether with an assemblage of rare wetland invertebrates three endangered insects and five other British Red Data Book species of nvertebrates). Bagmere SSSI Vybunbury Moss SSSI Tatton Meres SSSI The Mere, Mere SSSI Betley Mere SSSI Betley Mere SSSI	to recreational pressures)	Wybunbury Moss SSSI: CRE 2 Tatton Meres SSSI: TS 1 The Mere, Mere SSSI: TS 1	and 3.1km of Midland Meres and Mosses Phase 1 Ramsar (component site Bagmere SSSI), respectively. No effects in terms of increased recreational pressure are foreseen because Bagmere SSSI is not publicly accessible. <i>No likely significant effect</i> Wybunbury Moss SSSI: CRE 2 is planned for employment purposes only. No recreation impacts are therefore anticipated in relation to Wybunbury Moss SSSI. <i>No likely significant effect</i> Tatton Meres SSSI: TS 1 is less than 1km from Tatton Meres SSSI. It is unlikely that the development of a single GTTS site would have any significant recreational impact upon this European site. <i>No likely significant effect</i> The Mere, Mere SSSI: TS 1 is located approximately 3.8km from The Mere, Mere SSSI. It is unlikely that the development of a single GTTS site would have any significant recreational impact upon this European site. <i>No likely significant effect</i> No other component sites of the Midland Meres and Mosses Phase 1 Ramsar will be impacted upon through recreational pressure due to the distances of all sites within the SADPD from these component sites. <i>No likely significant effect</i>	to occur as a result of the proposed development in the SADPD. <i>No likely significant effect</i> Tatton Meres SSSI: TS 1 has no downstream hydrological connectivity to Midland Meres and Mosses Phase 1 Ramsar (Tatton Meres SSSI) and no change in the water table impacting upon Tatton Meres SSSI is anticipated to result from development of this site. <i>No likely significant effect</i> Wybunbury Moss SSSI: The potential development of CRE 2 is unlikely to result in adverse impacts on Wybunbury Moss SSSI, a component site of the Midland Meres and Mosses Phase 1 Ramsar, due to its relative distance from the Ramsar (3.2km) and the lack of hydrological connectivity to the site. <i>No likely significant effect</i> The Mere, Mere SSSI: The potential development of TS 1 is unlikely to result in adverse impacts on The Mere, Mere SSSI, a component site of the Midland Meres and Mosses Phase 1 Ramsar, due to its relative distance from the Ramsar (3.2km) and the lack of hydrological connectivity to the site. <i>No likely significant effect</i>	from the main road network. Air quality impacts from increased vehicles associated with the potential site allocations using the local road and motorway network are therefore unlikely because pollutant levels can be expected to fall to background levels at a distance of more than 200m (DMRB LA 105). <i>No likely significant effect</i> Tatton Meres SSSI: TS 1 is currently a lorry depot. Heavy good vehicles cause greater impacts upon air quality compared to individual cars (Natural England, 2018). The conversion of this site to a GTTS site from a Lorry Park, as well as the overall small size of this proposed site (3 plots), means that it is unlikely that there will be any increases from the baseline in air quality impacts (no increase in AADT) resulting in traffic on the Mobberley Road, where it falls within 200m of Tatton Meres SSSI. <i>No likely significant effect</i> Bagmere SSSI; in relation to agricultural/industrial air pollution. The site is approximately 2.7km from Bagmere SSSI, a component of Midland Meres and Mosses Phase 1 Ramsar. The proposed development could be for an expansion of the adjacent pharmaceutical business, which mainly functions to manufacture inhalation products. The new site could provide pharmaceutical facilities including manufacture and product innovation including formulation, filling and packing	impacts. <i>No likely significant effect</i> Natural England recommends that air quality impacts in relation to road traffic undergo an in-combination assessment for potential traffic increases relating to plans and projects (Natural England, 2018) However, due to the current use of the TS 1 site as a lorry park, a change in site use to support three GTTS plots will not cause an increase in the baseline AADT. Furthermore, no other plans and projects have been identified that could act in combination with the SADPD to increase traffic along the Mobberley Road. <i>No likely significant effect</i>

impacted upon, where applicable).		considered in the assessment	Recreational	Hydrological	Air quality		
				the Midland Meres and Mosses Phase 1 Ramsar will be impacted upon through hydrological impact pathways due to the distances of all sites within the SADPD from these component sites. <i>No likely significant effect</i>	activities. The site does not and would not engage in the manufacture of chemicals or biological agents, so emissions are low. Furthermore, Cheshire East Council has consulted with Natural England regarding potential air quality impacts of this proposed site and no concerns have been raised regarding Bagmere SSSI. TS 2 falls within the Impact Risk Zone for Bagmere SSSI zone, but only in relation air pollution from industrial/agricultural developments; combustion processes; landfill; composting; discharges for large infrastructure projects. This is therefore not applicable for these small-scale proposed GTTS sites. <i>No likely significant effect</i> Wybunbury Moss: CRE 2 is located 3.2km from Wybunbury Moss SSSI and is within the Natural England Impact Risk Zone for air pollution for any industrial/agricultural development (incl: industrial processes, livestock & poultry units with floorspace > 500m <sup>2</sup> , slurry lagoons > 750m <sup>2</sup> & manure stores > 3500t). CRE 2 will be limited to B1 and B8 uses and therefore is unlikely to involve industrial or agricultural processes which could lead to air quality impacts upon Wybunbury Moss SSSI. <i>No likely significant effect</i>		
Midland Meres and Mosses Phase 2 Ramsar Qualifying features:	Changes in water quality Changes in water levels or	None	No increases in recreational pressure to any other constituent SSSIs within Midland Mosses Phase 2 Ramsar	The potential for adverse effects due to changes in water levels and/or quality is highly unlikely due to the	The potential for adverse effects due to air quality changes from increased traffic associated with new development is highly unlikely	Natural England recommends that air quality impacts in relation to road traffic undergo an in-combination assessment	No likely significant effects. Screened out.
Criteria 1 - The site comprises a diverse range of habitats from open water to	table f Pollution (air)		are anticipated because all residential site allocations within the SADPD are at least 5km	distance of the Ramsar from the nearest site being considered for allocation	due to the distance of the Ramsar from any potential allocated site within the SADPD (at least	for potential traffic increases relating to plans and projects (Natural England, 2018). Designated Site (including component SSSIs likely to be	Potential Hazards		Potential hazard impact pathways			Potential in-combination effects with other plans or projects (if applicable) *	Screening assessment
impacted upon, where applicable).			Recreational	Hydrological	Air quality		
raised bog. Criteria 2 - Supports a number of rare species of plants associated with wetlands, including the nationally scarce Cowbane and Elongated Sedge. Also present are the nationally scarce bryophytes <i>Dicranum</i> <i>affine</i> and <i>Sphagnum</i> <i>pulchrum</i> . Also supports an assemblage of invertebrates including several rare species. There are 16 species of British Red Data Book insect listed for this site including the following endangered species: the moth <i>Glyphipteryx lathamella</i> , the caddisfly <i>Hagenella clathrata</i> and the sawfly <i>Trichiosoma</i> <i>vitellinae</i> .	damage (due to recreational pressures)		from the Ramsar. <i>No likely significant effect</i>	within Cheshire East (4.2km), and the lack of hydrological connectivity with any watercourses that could be affected by development. <i>No likely significant effect</i>	4.2km). <i>No likely significant effect</i>	not anticipated that the proposed development of EMP 2.3 will cause an increase in traffic on the M6 greater than the threshold for potential impact (1000 AADT) due to the small size of this proposed development. The increase in traffic due to this site alone will be negligible. No other plans and projects have been identified that could act in combination with the SADPD to increase traffic along this section of road. <i>No likely significant effect</i> The Local Plan SADPD is unlikely to have significant adverse effects on Midland Meres and Mosses Phase 2 Ramsar in- combination with any other relevant plans or projects. <i>No likely significant effect</i>	
Rostherne Mere Ramsar Qualifying features: Criteria 1 - Rostherne Mere is one of the deepest and largest of the meres of the Shropshire-Cheshire Plain. Its shoreline is fringed with common reed. Noteworthy Birds: - Great Cormorant - Great Bittern - Water Rail	Changes in water quality Changes in water levels or table Physical damage (due to recreational pressures) Disturbance	TS 1	TS 1 is located within 4.4 km of Rostherne Mere Ramsar However, it is unlikely that the development of a single small GTTS site would have any significant recreational impact upon this European site. <i>No Likely significant effect</i>	No proposed allocated sites in the SADPD, including TS 1, are located upstream of Rostherne Mere Ramsar and all are sites are at least 4.2km from this European site. Therefore, no hydrological impacts due to changes in water levels and/or quality as a result of the development of the potential allocated sites are anticipated. <i>No Likely significant effect</i>	Some sections of road within the vicinity of Rostherne Mere fall within 200m of the Ramsar site and therefore may impact on air quality at the Ramsar should vehicle usage increase associated with the potential allocated sites (DMRB LA 105). However, any potential increase in traffic on the A556 or other roads within 200m of Rostherne Mere as a direct result of TS 1 is considered to be negligible. <i>No likely significant effect</i>	Natural England recommends that air quality impacts in relation to road traffic undergo an in-combination assessment for potential traffic increases relating to plans and projects (Natural England, 2018). It is not anticipated that the GTTS proposed development in Knutsford (TS 1 – 3 plots) will cause an increase in traffic on the A556 or other roads within 200m of Rostherne Mere greater than the threshold for potential impact (1000 AADT). The increase in traffic due to this site alone will be negligible due to its small size. No other plans and projects have been identified that could act in combination with the SADPD to increase traffic along the Mobberley Road. <i>No likely significant effect</i>	No likely significant effects. Screened out

			Recreational	Hydrological	Air quality		
						Rostherne Mere Ramsar is considered in the HRA screening report for HS2 (cited in Temple- ERM, 2013). Although the HRA will require future updates, the initial report screens out any likely significant effects upon this Ramsar. The potential impact mechanisms discussed in the sustainability report are considered to be hydrological (ground water regime impacts). Any residual (non-significant) impacts resulting from this scheme would therefore be highly unlikely to impact on the Ramsar through any similar mechanisms to those impacts associated with the SADPD. <i>No likely significant effect</i> The Local Plan SADPD is unlikely to have significant adverse effects on the Rostherne Mere Ramsar in-combination with any other relevant plans or projects. <i>No likely significant effect</i>	
Mersey Estuary Ramsar Qualifying features: Criteria 5 - Assemblages of international importance: Species with peak counts in winter: 89576 waterfowl (5 year peak mean 1998/99- 2002/2003) Criteria 6 - species/populations occurring at levels of international importance. - Common Shelduck - Black-tailed Godwit - Common Redshank - Eurasian Teal - Northern Pintail - Dunlin	Changes in water quality Changes in water levels or table Physical damage (due to recreational pressures) Disturbance	None	It is unlikely that the development of any sites being considered for potential allocation in the SADPD will result in recreational/ disturbance impacts that extend as far as the Mersey Estuary Ramsar, which is more than 24km from the closest potential allocated site. <i>No likely significant effect</i>	The potential for adverse effects due to changes in water levels and/or quality is highly unlikely due to the distance (more than 24km) of the Ramsar from any potential site allocation within the SADPD. Any impacts on local watercourses due to development at the potential allocated sites are unlikely to cause significant effects on water levels/quality of the estuary that far downstream. <i>No likely significant effect</i>	The potential for adverse effects due to air quality changes from increased traffic associated with new development is highly unlikely due to the distance (more than 24km) of the Ramsar from any potential allocated site within the SADPD. <i>No likely significant effect</i>	The Local Plan SADPD is unlikely to have significant adverse effects on the Mersey Estuary Ramsar in-combination with any other relevant plans or projects. <i>No likely significant effect</i>	No likely significant effects. Potential in-combination effects with other plans or projects (if applicable) *	Screening assessment

The development policies within the SADPD have been screened out, both alone and in-combination with other plans or projects.

This screening assessment has determined that the SADPD site allocations and development policies are not likely to have significant effects, either alone or incombination with other plans or projects, on the following European sites:

- South Pennine Moors SAC
- Rixton Clay Pits SAC
- Brown Moss SAC
- Manchester Mosses SAC
- Oak Mere SAC
- Fenn's, Whixall, Bettisfield, Wem and Cadney Mosses SAC
- Peak District Dales SAC
- West Midlands Mosses SAC
- Peak District Moors (South Pennine Moors Phase 1) SPA
- Mersey Estuary SPA and Ramsar
- Dee Estuary SAC, SPA and Ramsar
- Mersey Narrows and North Wirral Foreshore SPA and Ramsar
- Midland Meres and Mosses Phase 1 Ramsar
- Midland Meres and Mosses Phase 2 Ramsar
- Rostherne Mere Ramsar

The SADPD site allocations and development policies could potentially have significant adverse effects, either alone and in-combination with other plans and projects, on the following sites:

• River Dee and Bala Lake SAC

This is due to increased abstraction pressures due to new development. Therefore, an Appropriate Assessment is required to assess in more detail the likely nature of the effects on the integrity of this European site.

JBA

## 6 Appropriate Assessment

#### 6.1 Introduction

This section describes Tasks 2 and 3 of the HRA of the Cheshire East SADPD, as outlined in Section 2.

Where the potential for significant effects has been identified, the nature and likely scale of effects on the integrity of the individual European sites are reported, excluding those aspects that have been screened out. Additional information and interpretation is provided to allow for a reasonable assessment of the effects, and to identify appropriate mitigation that can be included within the plan to ensure that adverse effects do not occur.

#### 6.2 Screening Conclusion

The HRA Task 1 screening assessment identified that the SADPD could potentially have significant adverse effects on the following site:

• River Dee and Bala Lake SAC

#### 6.3 Assessment of Effects on Site Integrity

This section details the Appropriate Assessment of the potential effects of the SADPD document on the integrity of the identified European site. This assessment lists and considers all qualifying species in the European sites. Any other typical habitats or species within or outside the boundaries of this protected site that are necessary to the conservation qualifying features are also considered in the assessment.

#### 6.3.1 River Dee and Bala Lake SAC

#### Qualifying Features

The River Dee and Bala Lake SAC qualifies as an SAC for the following features:

- Water courses of plain to montane levels with the *Ranunculion fluitantis* and *Callitricho-Batrachion* vegetation
- Floating Water Plantain *Luronium natans*
- Atlantic Salmon Salmo salar
- Sea Lamprey Petromyzon marinus
- River Lamprey Lampetra fluviatilis
- Bullhead *Cottus gobio*
- Brook Lamprey Lampetra planeri
- Otter *Lutra lutra*

#### Conservation Objectives

Natural England's conservation objectives for the River Dee and Bala Lake SAC are:

Ensure that the integrity of the site is maintained or restored as appropriate, and ensure that the site contributes to achieving the Favourable Conservation Status of its Qualifying Features, by maintaining or restoring:

- The extent and distribution of qualifying natural habitats and habitats of qualifying species
- The structure and function (including typical species) of qualifying natural habitats
- The structure and function of the habitats of qualifying species

- The supporting processes on which qualifying natural habitats and the habitats of qualifying species rely
- The populations of qualifying species, and,
- The distribution of qualifying species within the site.

#### Environmental Conditions Sustaining Integrity of Site

The River Dee and Bala Lake SAC extends from the upland source of the Dee at Bala Lake in Snowdonia, Wales through lowland Shropshire and Cheshire in England, to its outflow into the Dee Estuary, and includes some of the tributaries such as the Ceiriog. The screening assessment identified the potential effects on this SAC due to the increased demand for water.

The Dee is one of the most regulated rivers in the Europe, with flows controlled from the headwater reservoirs Llyn Celyn and Llyn Brenig, as well as Llyn Tegid (a natural lake). Together these secure a yield of around 13.5 cumecs of which 9.3 cumecs is allocated for licenced abstraction close to Chester - most of which is used for potable supply. The remaining 4.2 cumecs forms a statutory minimum flow over Chester Weir, which is maintained in all but the most severe drought conditions. In addition, a further 119 cumec days of storage is available in most years for special release and is utilised for fishery, recreation and water quality purposes (NRW, 2018).

The River Dee and Bala Lake SAC is vulnerable to the following pressures:

- Reduction in water quality
- Changes to quantity and patterns of water flow
- Excessive water abstraction
- Over fishing
- Introduction of non-native species

The screening assessment identifies that the SADPD could lead to increased levels of abstraction could significantly affect the levels of flow in the River Dee and hence result in significant effects on qualifying features.

#### Assessment of Impacts Upon Site Integrity

Details for the Appropriate Assessment of the Local Plan SADPD, both alone and incombination with other plans and projects on the integrity of the River Dee and Bala Lake SAC in relation to the impacts identified in the screening assessment are described in Table 6-1.

### Table 6-1: Test of adverse effects of integrity on River Dee and Bala Lake SAC

Qualifying Feature	Identified Hazard	Adverse Effect of SADPD Alone and In-combination	Avoidance/Mitigation Measures for SADPD impacts	Adverse impact upon Site Integrity
Riverine habitats and running waters Vascular plants of aquatic habitats Anadromous fish Non- migratory fish and invertebrates of rivers Mammals of riverine habitats	Changes in water levels or table <i>N.B. Changes</i> <i>in water</i> <i>quality,</i> <i>physical</i> <i>damage due</i> <i>to recreation</i> <i>pressure and</i> <i>disturbance</i> <i>were screened</i> <i>out during</i> <i>stage 1 of the</i> <i>HRA.</i>	Development of new housing and employment land within Cheshire East could lead to increased demand for water. Increased levels of abstraction could significantly affect the levels of flow in the River Dee and hence result in significant effects on any of the qualifying features as well as all of the typical habitats and species present which support these qualifying species. No other plans or projects have been identified which could act in-combination with the identified hazards for the River Dee and Bala Lake SAC.	The River Dee Catchment Abstraction Management Strategy (CAMS) 2015 identifies the River Dee as an important resource for public water supply as it is used to supply the homes of more than two million people. In dry periods when the river is being regulated, to protect this supply, more water is not available for abstraction from the River Dee (or its tributaries) upstream of Chester Weir. Additional water may be available during wetter periods, but abstractors are required to stop taking water as soon as the river flow dropped again. Natural Resources Wales may also have to place special conditions on any new licences granted to safeguard the wildlife and conservation interest of the River Dee (NRW, 2015). The secure provision of a water supply is not the statutory responsibility of Cheshire East Council or any other Local Authority; the responsibility lies with the water companies as statutory undertakers for the provision of water. The abstraction of water to provide a water supply is also heavily regulated by the Environment Agency and Natural Resources Wales. United Utilities is the principal water provider for Cheshire East and such provision is covered by the Strategic Resource Zone which serves 7 million people in South and West Cumbria, Lancashire,	No adverse impact upon site integrity
			Greater Manchester, Merseyside and most of Cheshire. The United Utilities Final Water Resources Management Plan 2019 provides a comprehensive statement of their water supply and	

Qualifying Feature	Identified Hazard	Adverse Effect of SADPD Alone and In-combination	Avoidance/Mitigation Measures for SADPD impacts	Adverse impact upon Site Integrity
			water demand forecasts between 2020 and 2045. It also describes the resulting supply-demand balances and the actions they propose to take as part of their preferred strategy to achieve water supply reliability standards for their customers.	
			The Plan states that the water available for use in the Strategic Resource Zone is expected to meet the projected demand between 2020 and 2040, but there is a very small predicted deficit between 2041 and 2045, due to economic and population growth and climate change. This deficit is addressed through leakage reduction and water efficiency. The plan also considers water supply resilience risks and considers future water trade options with other parts of the UK (although trade is not within the preferred plan but considered for the future). The Plan's HRA does not identify any adverse impacts upon European sites, although acknowledges that project-level HRAs are required.	
			United Utilities abstract water from the River Dee at various locations to supply both potable and non-potable customers, including a supply of raw water from the River Dee to Dŵr Cymru Welsh Water and a non-potable supply of raw water from the River Dee to industrial customers in the Wirral (80. Ml/d on average).	
			The River Dee is managed by Natural Resources Wales through a regulation scheme. United Utilities abstractions are governed by the River Dee General Directions (NRW, 2016; United Utilities 2018), which set out rules for abstraction during drought conditions and are approved by the statutory Dee Consultative Committee.	
			Therefore, it is unlikely that the SADPD will result in the need for

Qualifying Feature	Identified Hazard	Adverse Effect of SADPD Alone and In-combination	Avoidance/Mitigation Measures for SADPD impacts	Adverse impact upon Site Integrity
			further abstraction from the River Dee.	

## 7 Conclusions

Regulation 105 of the Conservation of Habitats and Species Regulations 2017 (as amended) (the 'Habitats Regulations') states that if a land-use plan is "(a) is likely to have a significant effect on a European site or a European offshore marine site (either alone or in-combination with other plans or projects); and (b) is not directly connected with or necessary to the management of the site" then the plan-making authority must "...make an appropriate assessment of the implications for the site in view of that site's conservation objectives" before the plan is given effect. The process by which Regulation 105 is met is known as Habitats Regulations Assessment (HRA).

It is accepted best-practice for the HRA of strategic planning documents to be run as an iterative process alongside the plan development, with the emerging policies and sites proposed for development continually assessed for their possible effects on European sites and modified or abandoned (as necessary) to ensure that the subsequently adopted plan is not likely to result in significant effects on any European sites, either alone or 'in combination' with other plans or projects.

HRA has been undertaken throughout the development of the Cheshire East Local Plan and has informed key stages and assessment work, including the selection of sites proposed for development. This report details the HRA for the Revised Publication Draft version Cheshire East Local Plan SADPD.

The most likely effects of the SADPD on European sites are related to pressures from new development including water abstraction, changes to surface and ground water levels/quality (surface run-off, pollution events), air pollution and increased recreational pressures arising from new housing developments and increased tourism.

The Screening Assessment determined that the SADPD is not likely to have significant effects, either alone or in-combination with other plans or projects on the following European sites:

- West Midlands Mosses SAC
- South Pennine Moors SAC
- Rixton Clay Pits SAC
- Brown Moss SAC
- Manchester Mosses SAC
- Oak Mere SAC
- Fenn's, Whixall, Bettisfield, Wem and Cadney Mosses SAC
- Peak District Dales SAC
- Peak District Moors (South Pennine Moors Phase 1) SPA
- Mersey Estuary SPA and Ramsar
- Dee Estuary SAC, SPA and Ramsar
- Mersey Narrows and North Wirral Foreshore SPA and Ramsar
- Midland Meres and Mosses Phase 1 Ramsar
- Midland Meres and Mosses Phase 2 Ramsar
- Rostherne Mere Ramsar

Likely significant effects as a result of changes in water levels (due to abstraction) have been identified for River Dee and Bala Lake SAC.

The Appropriate Assessment identified that the existing policies and provisions of Natural Resources Wales, the Environment Agency and United Utilities, through the Dee Catchment Abstraction Management Plan (2015), the River Dee General Directions (NRW, 2016) and the United Utilities Final Water Resources Management Plan 2019 in relation to water supply, will ensure that the Local Plan SADPD will have no adverse impact on this European site.

## A Map showing distribution of European sites around Cheshire East

Strategic Economic Plan. Cheshire and Warrington Matters	This is a ten year strategic economic plan to support growth and economic development. It sets out intervention priorities and investment proposals. In Cheshire East, an outcome is to improve the connectivity between Crewe, the M6 and mid-Cheshire towns for the development of Crewe High Growth City.	This strategy could potentially have adverse in-combination effects if it proposes developments in close proximity to European sites.
Cheshire East Corporate Plan 2017 to 2020	The Corporate Plan consists of six outcomes that demonstrate how Cheshire East Council will put the residents of Cheshire East first in the way that services are provided. Outcome numbers 1-5 focus on activities directly affecting residents and local businesses. Outcome number 6 focuses on maximising value for money in the way the Council operates.	The outcomes of the Corporate Plan are compatible with those of the Local Plan and are unlikely to result in in-combination effects.
Cheshire East Local Transport Plan 2019-2024	This Local Transport Plan is a strategic plan for the development of transport within Cheshire East over the period 2019 to 2024, outlining how transport will contribute to and support the longer-term aspirations of the Borough.	The Local Plan supports schemes outlined within the Transport Plan and promotes sustainable transport. The majority of actions within this plan would not give rise to any potential impacts upon European sites. However, development supported by the actions in this plan, such as upgrades to railway lines and the investment in road infrastructure, could potentially lead to adverse in combination impacts, should any developments occur within proximity to any European sites.

Document	Summary of content, objectives and targets	Potential for in-combination effects on European sites
Cheshire East Rights of Way Improvement Plan 2011-2026 and Implementation Plan 2015 - 2019	The Cheshire East Rights of Way Improvement Plan was developed to assess: the extent to which the local rights of way network meets the present and future needs of the public; the opportunities provided by the local rights of way network for exercise and other forms of open-air recreation and the enjoyment of the Local Authority's area; and the accessibility of local rights of way for blind or partially sighted persons and others with mobility problems. The plan also contains a statement of the actions that the authority proposes to take for the management of local rights of way, and for securing an improved network of local rights of way.	The aim of this plan is to maintain and improve the provision of green infrastructure within the county, the connectivity of the network, the provision for cyclists and horse riders and the network's accessibility for all users, including those with a disability. Improvements to, and expansion of, the Rights of Way network, if located in close proximity to European sites, could result in in- combination effects through increased visitor numbers which may result in adverse impacts such as disturbance (i.e. noise, visual) or physical damage (i.e. vandalism, trampling). However, these initiatives are Borough-wide and therefore would also increase accessibility to other areas and routes away from European sites.
Housing Strategy: 2018 to 2023	This Housing Strategy sets out Cheshire East's long term housing vision for the Borough. The housing vision of the document is that housing supports the creation of balanced and sustainable communities, where all residents can achieve independent living in good quality, affordable homes that are appropriate to their needs.	The objectives of the Housing Strategy are compatible with those of the Local Plan and are unlikely to result in in-combination effects.
Local Air Quality Strategy for Cheshire East Council and Action Plan	This strategy outlines high level, broad commitments across the Council aimed at improving air quality. The Action Plan outlines measures to make sure that air quality work undertaken within the Borough is coordinated at a strategic level. The current action plan addresses poor air quality in the following areas: M6 Cranage; West Road,	This Strategy and Action Plan aims to improve air quality across the County and identifies specific areas where poor air quality is to be addressed. In general, the Local Plan is compatible with this Strategy and Action Plan as it aims to reduce travel by improving connectivity, public transport and green infrastructure, which should reduce traffic emissions. This strategy may therefore reduce the impact of atmospheric deposition on European sites.

Document	Summary of content, objectives and targets	Potential for in-combination effects on European sites
	Congleton; A34 to A54, Rood Lane, Congleton; A534 Hospital Street, Nantwich; A34 Lower Heath, Congleton; A5022/A534, Sandbach; and A556 Chester Road, Mere. The Action Plan focuses on these areas and the impact of nitrogen dioxide from transportation sources.	
Cheshire East Visitor Economy Strategy 2016- 2020	A visitor economy strategy for Cheshire East was first adopted in February 2011 to cover a five year period. This has now been updated for the period 2016-20, providing an approach to maintaining growth. It sets out the Council's aspirations to continue to enhance and grow Cheshire East's visitor economy for the benefit of the current residents, its future residents and its visitors.	The ambition of the Strategy is focussed around maximising growth of the visitor economy whilst ensuring greater prosperity across the widest number of communities and encouraging participation that will lead to greater wellbeing for both residents and visitors. This includes developing a distinctive rural tourism offering. Promotion of the countryside as part of the visitor economy by this strategy and the Local Plan SADPD could therefore result in adverse in-combination effects on nearby European sites as a result of increased visitor pressure. For example, the Tatton/Knutsford/ Jodrell area is identified as a key hub for developing the visitor economy and being located in close proximity to Rostherne Mere Ramsar and Tatton Meres SSSI (part of the Midland Meres and Mosses Phase 1 Ramsar) may suffer from increased visitor pressure. This strategic framework however, does recognise that the protection and enhancement of the County's natural assets, such as the Meres and Mosses is a fundamental requirement in defining the quality of experience that visitors seek.
Cheshire Replacement Minerals Local Plan 1999	<ul> <li>This Plan provides planning advice on where mineral development can take place. It covers both Cheshire East and Cheshire West &amp; Chester</li> <li>Boroughs. Together, these Boroughs contain a variety of minerals including salt, construction sand and silica sand which are important to the regional and national economy.</li> <li>A philosophy of sustainable development underpins</li> </ul>	Both the Local Plan Strategy and the Minerals Local Plan identify the need for Cheshire East to provide an adequate and steady supply of minerals in support of sustainable economic growth. The Local Plan has recognised that, for all mineral extraction, it is essential that workings do not give rise to any unacceptable adverse impacts on the natural environment and therefore detailed policies will be brought forward through the SADPD and the Minerals and Waste Development Plan Document, setting out criteria against

Document	Summary of content, objectives and targets	Potential for in-combination effects on European sites
	<ul> <li>the Cheshire Replacement Minerals Local Plan. This philosophy looks at conserving the County's environment and natural resources for the benefit of future generations.</li> <li>The Plan proposes that future working of salt, silica sand and sand and gravel should come from limited areas of the County and that detailed policies will minimise the impact of all mineral working by enabling rigorous monitoring of site operations and ensuring a positive restoration of sites on set timescales for both phasing and completion.</li> </ul>	which all mineral related planning proposals will be assessed, consistent with national policy and guidance.
Cheshire Replacement Waste Local Plan 2007	<ul> <li>This Replacement Waste Local Plan attempts to achieve a more sustainable approach to waste management within Cheshire. The Plan aims to fulfil this purpose in two ways:</li> <li>a) by establishing policies against which planning applications for the development of waste management facilities will be assessed.</li> <li>b) by identifying sites which are considered suitable `in principle' for a waste management use in order to enable the development of an adequate network of waste management facilities.</li> </ul>	The Cheshire East LPS states that to achieve the sustainable management of waste in Cheshire East, the Council will prepare a Waste Development Plan Document (DPD) consistent with national waste planning policy. Policy will be set by the Minerals and Waste DPD to ensure that the environment is protected through the prevention or reduction of the adverse impacts of the generation and management of waste.
Saved Policies from the Congleton Borough Local Plan First Review, Borough of Crewe and Nantwich Local Plan and Macclesfield Local	plans that remain part of the statutory development plan for Cheshire East and can still be used in determining planning applications. Currently, these Local Plans have saved policies	The saved policies of these Local Plans are compatible with those of the Local Plan Strategy and SADPD and are unlikely to result in in- combination effects.

Document	Summary of content, objectives and targets	Potential for in-combination effects on European sites
Plan	the Cheshire East Local Plan.	
The United Utilities Final Water Resources Management Plan 2019	This plan describes in detail United Utilities' assessment of the available water supplies and the demand for water by their customers over the 2020-2045 period. The plan also sets out their proposed strategy for water resources and demand management to ensure they have adequate water supplies to serve their customers.	United Utilities is the principal water provider for Cheshire East and such provision is covered by the Strategic Resource Zone which serves 7 million people in South Cumbria, Lancashire, Greater Manchester, Merseyside and most of Cheshire. Development of new housing and employment land within Cheshire East, as outlined in the LPS and SADPD, could lead to increased demand for water. Increased levels of abstraction could significantly affect the levels of flow in the River Dee and hence result in significant effects on qualifying features.
The Weaver and Dane Catchment Abstraction Management Strategy (CAMS)	This Strategy sets out how water resources are managed by the Environment Agency in the Weaver and Dane area. It provides information about where water is available for further abstraction and an indication of how reliable a new abstraction licence may be.	Development of new housing and employment land within Cheshire East, as outlined in the Local Plan SADPD, could lead to increased demand for water abstractions. However, as stated in the CAM, the Environment Agency has assessed the effects of existing abstraction licences and will assess all new applications to make sure they are not impacting on internationally important nature conservation sites.
The Dee Catchment Abstraction Management Strategy (CAMS)	This Strategy sets out how water resources are managed by the Environment Agency in the Dee catchment. It provides information about how much and where water is available for further abstraction.	Development of new housing and employment land within Cheshire East, as outlined in the Local Plan SADPD, could lead to increased demand for water abstractions. The River Dee is an important resource for public water supply and used to supply the homes of more than two million people. Because of the over-riding need to protect this supply, more water is not available for abstraction from the River Dee (or its tributaries) upstream of Chester Weir, when the river is being regulated. Some additional water may be available during wetter periods, but abstractors would be required to stop taking water as soon as the river flow dropped again. The Environment Agency may also have to place special conditions on any new licences granted to safeguard

Document	Summary of content, objectives and targets	Potential for in-combination effects on European sites
		the wildlife and conservation interest of the River Dee.
Greater Manchester Spatial Framework Revised Draft- January 2019	A joint plan to manage the supply of land for jobs and new homes across Greater Manchester up to 2035, along with identifying new infrastructure. The key themes are: Garden City Suburbs; Greener Growth; Opportunity for all; homes you can afford and local benefits.	Site allocations for this strategy are located around Greater Manchester. Some of the allocations for the Stockport area are within the vicinity of the site allocations at the Poynton Settlement. This allocation is, however, more than 10km from the nearest European site, as are the other allocations to the east of Manchester Airport. The proposed Heald Green allocation for Greater Manchester is within the vicinity of the Alderley Edge proposed allocations within the SADPD. However, there are no effects identified for these SADPD proposed site allocations due to the distance of Alderley Edge from any European sites. No in-combination effects are therefore anticipated between the SADPD and the Greater Manchester Spatial Framework Revised Draft 2019.
Local Plans and Core Strategies of adjacent Authorities (Cheshire West and Chester; Peak District National Park, High Peak; Manchester; Newcastle-under- Lyme; Stockport; Shropshire; Staffordshire Moorlands; Stoke- on-Trent; Trafford; and Warrington Council's)	These documents contain the development plan for the relevant adjacent area. They will specify a vision, objectives and policies for each area.	There is the potential for adverse in-combination effects, particularly in boundary areas. If projects (i.e. developments, infrastructure construction) proposed in the Local Plan Strategy are located in relatively to close proximity to those proposed by the Local Plans and Core Strategies of neighbouring authorities, adverse effects may arise if there are cross-boundary or nearby European sites.
Cheshire East Green	This plan is a road map for a comprehensive and connected Green Infrastructure across Cheshire	Although sustainability underpins this plan, improving the multifunctionality of greenspaces could lead to conflicts with

Document	Summary of content, objectives and targets	Potential for in-combination effects on European sites
Infrastructure Pan 2019 (Cheshire East, 2019 <sup>c</sup> )	East as a framework for residents, partners, landowners and developers to develop projects that deliver net gain in green infrastructure.	European sites. For example, a target activity of the plan is 'Getting Outdoors Easily', which could increase recreational activity at European sites vulnerable to disturbance.
Cheshire East Council Environment Strategy (2020 – 2024)	This document has been developed to ensure that all emerging strategies, plans and projects in Cheshire East consider the environment and climate change.	This strategy supports the SADPD and will not give rise to any in- combination effects on European sites because it is a general framework for sustainability.
Carbon Neutrality Action Plan 2020 - 2025	This plan provides actions for Cheshire East Council to consider in support of its carbon neutral 2025 target.	This plan supports sustainable development for the long- term decarbonisation of Cheshire East Council. None of the actions outlined in this plan would give rise to impacts upon any European sites.

## D Other Relevant Projects

Project Name	Summary of Project	Potential In-combination Effect on European Sites
Congleton Link Road	A new 5.5km bypass is proposed for Congleton. Site under construction. Works are anticipated to be completed by 2020	This proposed road is within 3km of Midland Meres and Mosses Ramsar (Bagmere SSSI). No aspect of the Cheshire East SADPD will impact upon this constituent site of the Ramsar.
HS2	A new high-speed railway line connecting London, Birmingham, the East Midland, Leeds and Manchester. HS2b will pass through Cheshire East, from Crewe to Manchester	The proposed new railway route will pass within the vicinity of European sites including Midland and Mosses Phase 1 Ramsar (The Mere, Mere SSSI), Rostherne Mere Ramsar and Manchester Mosses SAC. The sustainability report (Temple ERM, 2013), makes reference to the HRA screening exercise, which is not publicly accessible at present. The HRA screening rules out likely significant effects of the scheme on the three European sites.
A500 Dualling	Upgrade the section of the A500 between Meremoor Moss roundabout and M6 junction 16 to dual carriageway standard.	This proposed project is located within 2km of Midland Meres and Mosses Phase 2 Ramsar constituent sites Oakhanger Moss SSSI and Black Firs & Cranberry Bog SSSI. No aspect of the Cheshire East SADPD will impact upon these constituent sites of the Ramsar. No in- combination effects are therefore anticipated.
Middlewich Eastern Bypass	This project has planning permission. The current programme (subject to planning and final funding approvals) is for main works to start in 2021 with an estimated 30 month construction period.	All sites considered for allocation in the SADPD in the Middlewich area are at least 7km from the nearest European site (Midland Meres and Mosses Phase 1 Ramsar (Bagmere SSSI)) and no potential impact pathways were identified regarding any European site. As there will be no impacts on any European sites, no pathways can interact in-combination with this proposed project.
North West Crewe Package (road scheme)	Proposed road scheme adjacent to Leighton Hospital (north-west Crewe).	Impacts relating to proposed sites for the SADPD in the Crewe area relate to potential impacts upon the Midlands Meres and Mosses Phase 1 Ramsar (Wynbunbury Moss SSSI) (in relation to CFS 594). The proposed road scheme is located more than 5.8km from Wynbunbury Moss SSSI. Due to the distance of this road scheme from the

JBA

		act in-combination with the proposed site allocation, CFS 594.
Poynton Relief Road	Single carriageway 3km in length being developed by Cheshire East Council in partnership with Stockport Council, running to the west of Poynton. This project has planning permission and a tender was recently awarded for the roads construction.	There are sites proposed for allocation in the SADPD within Poynton, but all of these are located more than 9km from the nearest European site (South Pennine Moors SAC and Peak District Moors (South Pennine Moors Phase 1) SPA). As the SADPD will have zero impact upon any European sites alone, no in-combination effects with Poynton Relief Road can occur.
